TEAM CONTRACT

Strategies For Professional Growth

Team 07

Purpose

Our team's purpose is to collaboratively investigate the dynamic relationship between transformative technologies such as Artificial Intelligence, automation, and digital platforms and the critical skillsets required for future professional success. Guided by principles of professional growth, we will apply effective communication, strategic project management, and constructive conflict resolution to execute this project.

Our goal is to produce a comprehensive analysis that not only identifies emerging skill gaps but also provides actionable recommendations for individuals and organizations to thrive in a tech-driven landscape. By leveraging our diverse backgrounds and fostering an inclusive, supportive team environment, we aim to deliver an innovative and high-quality project that exemplifies academic excellence and practical insight.

Team Details

Our team represents a blend of diverse academic and professional backgrounds, bringing together unique strengths from social sciences, management, mathematics, engineering, and data science. This diversity enables us to approach problems from multiple perspectives and build well-rounded solutions.

Watham Sabyasachi

22f2000095@ds.study.iitm.ac.in

Electrical Engineering graduate with interests in Power Electronics and Machine Learning. His technical expertise and coding skills add depth to the team's computational and problem-solving capabilities.

Anushka

21f1003889@ds.study.iitm.ac.in

MBA in General Management from Dayalbagh Educational Institute, Agra, with HR experience and a passion for analytics. She connects management principles with data driven strategies, ensuring structured and goal-oriented collaboration.

Mohammad Sarim (Leader)

21f2001224@ds.study.iitm.ac.in

Holds a Bachelor's in Sociology and English and is pursuing a B.S. in Data and Applications from IIT Madras. With experience in community welfare and education, he brings human-centric insights and a strong social perspective to the team.

Premshuk Saha

23f1000448@ds.study.iitm.ac.in

Data Science learner with a keen interest in data exploration and collaborative research. He encourages knowledge sharing and inclusivity, fostering an environment of mutual growth.

Aneeqa Haroon Siddiqui

21f2000377@ds.study.iitm.ac.in

Completed her Bachelor's in Mathematics and is pursuing Data Science at IIT Madras along with a Master's in Statistics. Her quantitative mindset and analytical skills strengthen the team's statistical and logical foundation.

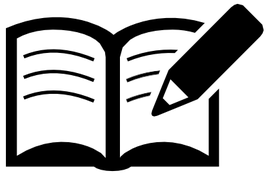

Transition Processes

Transition Processes involve the essential planning and reflection activities a team uses to set its direction and improve its effectiveness.

What are our performance goals?

Our main goal is to earn a high grade by producing excellent work. We will focus on creating innovative solutions, not just following instructions. We will make sure every team member contributes fairly to complete all required tasks on time.

What are our learning goals?

We want to learn how to work better as a team. We will practice giving clear feedback and managing our project efficiently. A key goal is to improve our research skills by conducting and analyzing professional interviews.

What are our people goals?

We aim to create a friendly and supportive atmosphere where everyone enjoys working together. We hope to build strong professional relationships and become a team that trusts each other and communicates openly.

Action Processes

These are the practical steps and daily interactions we use to execute our plans and achieve our team goals.

How will we organise leadership for this project?

Effective leadership combines initiative, organization, and the ability to facilitate collaboration rather than dictate. We have selected a project leader based on demonstrated qualities. During our first meeting, Sarim showed strong initiative by guiding the conversation and organizing resources. His collaborative approach in distributing tasks led the team to unanimously select him as our leader to ensure structured and inclusive progress.

How will we work together at different stages of the team task (e.g. work separately then pool ideas, pass the task sequentially, all work simultaneously)?

We use a flexible, hybrid approach. For complex tasks, we collaborate in real-time during meetings. For individual assignments, we work separately but maintain constant communication through WhatsApp/Telegram for quick help and suggestions. We regularly share progress updates to ensure alignment, choosing to work alone or together based on the task's complexity and required specialization.

What roles would the other members play?

Roles are assigned based on individual interests and strengths, such as video editing and document formatting. For collaborative tasks like interview planning, all members contribute equally, each suggesting and researching potential interviewees. This flexible approach ensures everyone engages in both specialized and shared responsibilities.

Action Processes

(Contd.)

What communication mode will we use and when?

Our primary platform is WhatsApp for daily discussions. We use Telegram for formal announcements and resource sharing. For urgent decisions or detailed planning, we schedule meetings on Google Meet when all members are available.

When and where will we hold our meetings?

Our meetings will be held on Google Meet. The team leader will schedule the meetings and ensure participation, coordinating through WhatsApp and sending reminders via Telegram. Meeting times will be set to accommodate everyone's availability, especially since some members are working professionals. Active participation is expected from all team members, who should join on time, contribute to discussions, and inform the leader if they cannot attend. After each meeting, the leader will share a follow-up message summarizing key decisions, action items, and deadlines to keep everyone aligned.

When and how will we review progress on goals? What is our process for setting and meeting deadlines?

We will regularly check our progress by sharing updates in the WhatsApp group and discussing key points during meetings. This helps us see what has been achieved, identify any challenges, and make adjustments as needed. The timing and approach for these updates will be agreed upon together so it fits with our project milestones and everyone's availability. Deadlines will be set collaboratively, taking into account each member's workload and commitments. By keeping communication open, everyone stays informed about what needs to be done and by when. Regular updates and discussions will ensure that tasks are completed on time, fairly, and in a way that supports the entire team.

Action Processes

(Contd.)

How will we share the workload (quantity, quality, time)? What will we do when a team member is doing more (or less) work than others?

Each member will be presented with tasks and can voluntarily take work based on their expertise and strengths. To stay balanced, we will set small deadlines and everyone will share progress in the group, creating a transparent check-in system without finger-pointing. If a genuine issue arises, it will be discussed openly and tasks will be reassigned as needed. Clear communication and timely updates will ensure fairness and teamwork so no one feels superior or inferior.

How will we help team members (sharing knowledge and resources)?

We will use a shared drive to keep resources and contributions accessible to all. If a member struggles, others will provide support and arrange quick Google Meet sessions for clarification. Everyone is encouraged to share ideas, articles, or tools in the group so knowledge flows openly. This way, we maintain transparency, learn from each other, and ensure no one is left behind.

How are decisions made (e.g. consensus, majority, selected by leader, other)?

Our primary method is collaborative consensus. We ensure every member's perspective is heard and discussed. If a unanimous agreement cannot be reached, we make the final decision through a majority vote to maintain progress and team harmony.

Interpersonal Processes

Interpersonal Processes focus on maintaining positive team relationships through effective communication, conflict resolution, and mutual support.

How will we manage conflict if it becomes personal and not task related?

To manage conflicts that become personal rather than task-related, our team will address issues as soon as they arise. We will first try to understand the root cause and have open, respectful discussions with the concerned member(s). Everyone is encouraged to practice active listening and consider each other's perspectives, focusing on areas of agreement. Even if the conflict is personal, we will maintain professional behavior, avoiding gossip, complaints outside the group, or unprofessional communication. If needed, the team will work together to find a fair resolution, ensuring a positive and supportive team environment for everyone.

How will we celebrate successes & commiserate goals we do not meet?

We will celebrate successes by acknowledging everyone's contributions through team meetings, messages in the group, or other forms of recognition. Celebrating achievements helps boost morale, motivation, and team cohesion, creating a positive and encouraging environment. When goals are not met, we will approach them as learning opportunities rather than failures. The team will discuss openly what went wrong, identify lessons, and support each other to improve. By fostering open communication and a no-blame culture, we aim to maintain positivity and ensure that challenges contribute to growth for both the team and individual members.

What will we do to make the experience of working together a positive one?

We will create a positive team experience by communicating openly, listening actively, and respecting each member's ideas and skills. Collaboration and adaptability will guide our approach, while regular feedback helps us address issues and improve together. This ensures a supportive, productive, and encouraging environment for all.
